

LOCAL COMPANY STARTS NEW DIVISION FOR SPORTING GOODS SANITIZATION AND BUILDING HYGIENE SERVICES

For Official Release

July 23rd 2009

East Brunswick, NJ – Insurance Restoration Specialists, Inc.(IRS) out of East Brunswick, New Jersey has been in the disaster recovery business for over 25 years. The business has traditionally conducted fire damage restoration, sewage and water damage remediation, mold remediation and oil tank remediation services. Then IRS started getting into the building hygiene business, responding to outbreaks of MRSA, ringworm and other pathogens. “It was a natural progression over the years to the evolution of our new division Infection Control Technologies says Tim Jarema, CEO. We looked into several products and options so that we can help facilities such as sports, schools, medical and day care reduce risk to evolving biological threats.” Infection Control Technologies (ICT) has a new wash system that can take sporting goods such as helmets, shoulder pads, gloves and other goods, sanitize them and treat them with a long lasting anti-microbial nano-technology that can significantly reduce the bacterial count. How many kids share equipment? With current practices cleaned and disinfected surfaces are only as clean as the next person who touches it. The goal is very simple, reduce risk, increase positive outcomes and keep athletes and people from being sidelined due to illness. With the CDC and the World Health Organization preparing for a bad flu season, ICT is being proactive in getting surfaces and facilities treated and sporting equipment washed and treated to help mitigate risk. ICT has offices in New Jersey and in Eastern PA. Infection control Technologies can be reached at www.infectioncontroltech.com. To tour the facility please contact us at (888) 949-9888.
